An Aeroflot Boeing 737-800 ran into some problems while trying to land at Krasnoyarsk, Russia on 30 th September. The aircraft was preparing to descend before landing when an electrical fault caused several systems, including the autopilot, to fail. The aircraft was able to land safely shortly after the incident.

durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee

the result of the airplanes' unexpected movement of their rudders. During the course of the four and a half year investigation of the crash of USAir Flight 427 near Aliquippa, Pennsylvania, killing 132 people, the NTSB discovered that the PCU's dual servo valve could jam as well as deflect the rudder in the opposite
