From the publishers of Architectural Graphic Standards, this book, created under the auspices of The American Planning Association, is the most comprehensive reference book on urban planning, design, and development available today. Contributions from more than two hundred renowned professionals provide rules of thumb and best practices for mitigating such environmental impacts as noise, traffic, aesthetics, preservation of green space and wildlife, water quality, and more. You get in-depth information on the tools and techniques used to achieve planning and design outcomes, including economic analysis, mapping, visualization, legal

foundations, and real estate developments. Thousands of illustrations, examples of custom work by today's leading planners, and insider information make this work the new standard in the field. Order your copy today.

This book is a study of design initiatives and policies in five US West Coast cities -- Seattle (including Bellevue), Portland, San Francisco, Irvine and San Diego--all of which have had particularly interesting urban design experience of relevance to practice in Britain and other countries. Although these cities are not a representative sample of all American design practice, they provide a rich vein of ideas about recent policy development and current initiatives which will stimulate thought about the formulation of effective design controls. The presentation of substantial extracts

from key documents that underpin design controls in the five cities will be of interest, inspiration and practical use to academics and practitioners who want to know more about American practice and who want to contribute to improvements in the standards and quality of urban design policies and design control. The opening chapter provides a national context and a comparative framework for the study, with a focus on international perspectives, American planning systems and the development of criteria for comparison and evaluation. The five subsequent chapters take each city in turn, briefly reviewing the salient characteristics of each one before presenting an account of how planning and design policy have evolved in the last twenty-five years; key features of the contemporary systems of design control are highlighted and a summary evaluation is made. The focus in the case studies is on

how policy and guidance have been formulated, structured and presented in the various documents that make up the policy framework, how the process of control operates, and how both respond to the criticisms commonly made of design and control. This final chapter draws general conclusions about the experience of the studied cities of wider relevance to American design review practice, but which are of interest to those engaged in design review and policy formulation everywhere.

various types of occupancies are combined into the same buildings. A rapidly developing trend is a desire for mixed-use spaces to support lifestyle activities. An increasing number of people are working from home, so they need flexible mixed-use spaces that can accommodate their lifestyle. People are on the lookout for more luxury amenities, such as full fitness and yoga studios, conference centers with commercial kitchens, rooftop pools and spas, and lobby bars and coffee shops. This Technical Standards and Design Guidelines (TSDGs) contains information intended as minimum standards for constructing and equipping new Mixed Use Building projects. Insofar as practical, these standards relate to desired performance or results or both. Details of Architectural and Engineering are assumed to be part of good design practice and local building regulations. This document covers mixed-use

building facilities common to a multitude of individual facilities. Facilities with unique services will require special consideration. However, sections herein may be applicable for parts of any facility and may be used where appropriate. The Property Developer will supply for each project a functional program for the facility that describes the purpose of the project, the projected demand or utilization. The TSDG includes a description of each function or service; the operational space required for each function; the types of all spaces; the special design features; the systems of operation; and the interrelationships of various functions and spaces. The functional program includes a description of those services necessary for the complete operation of the facility. The functional programs could be applied in the development of project design and construction documents. These standards assume that appropriate

architectural, engineering and technology practices and compliance with applicable codes will be observed as part of normal professional service and require no separate detailed instructions. Specialist designers adopting the TSDGs are encouraged to apply design innovations and the property developer to grant exceptions where the intent of the standards is met. Sustainability and Energy Conservation Energy efficiency being a part of the building code requirement in many states, the trend is moving toward achieving it. Higher-performing building envelopes and higher-performing HVAC and lighting systems are some of the essential components to meet current energy codes. The importance of Environmental Sustainability and Energy Conservation is fully considered in all phases of facility design development. Proper planning and selection of building materials, mechanical and electrical systems,

as well as efficient utilization of space and climatic characteristics that will significantly reduce overall energy consumption are fully described. The quality of the building facility environment is undoubtedly supportive of the occupants and functions served. New and innovative systems that accommodate these considerations while preserving cost effectiveness has been encouraged.

Architectural elements that reduce energy consumption are considered part of the TSDG. In addition to Energy Conservation, buildings will be designed to minimize water consumption and operating costs without reducing occupancy standards, occupant health safety or comfort. Water conservation measures such as water-recycling including gray water and rain water collection, water purification, and sewerage recycling are included for consideration and recommendation in the project specific building

energy brief. The integration of innovative water efficiency measures, such as storm water management, rainfall capture, treated effluent reuse, roof gardens and other alternative sources of water supply are fully described. Technology In today's ever-changing environment, technological standardization and integration of systems is essential. Technology is viewed as a competitive tool that contributes to the improvement of building occupant services and operating efficiencies. As the importance of access to information increases, so do customer demands for such services. The Intelligent Buildings Market is a rapidly evolving segment that is being influenced by a number of emerging trends. Mobile communications connect people to work, entertainment and each other in ways that boost productivity and enhance lives. Both Operational Technology (OT) and Informational Technology (IT)

have entirely changed, and it will change even more as we get deeper into the Internet of Things (IOT). In-Building Wireless (IBW) communications provide the critical link to enable the use of cell phones, pagers, PDAs, two-way radios, wireless LANs, emergency communications and wireless building system devices within an enclosed structure. The technology disciplines (telecom, security, building automation, and lighting) have been going through a convergence over the past several years, with telecom wired and wireless networks becoming the common utility for all the technology disciplines.

Until recently, most green rooftop gardens were little more than variations on sedum mats on four inches of soil. Now, designers are creating cutting-edge green roofs that focus not only on critical environmental issue like heat, storm management, and ecosystem development, but also on the aesthetics, offering beautiful, livable, sustainable landscapes. The Professional Design Guide to Green Roofs is a comprehensive exploration of rooftop garden design and the process behind it. It covers everything landscape architects and garden designers need to know to create a beautiful garden in the sky. With lush photography, international examples, and solid how-to information, this is an essential resource for all design professionals.

This collection of papers addresses two questions central to design and historic preservation: what are the parameters of 'compatibility' in the design of additions to historic buildings and of new infill buildings in historic districts and landscapes. Presented at the 'Third National Forum on Historic Preservation Practice: A Critical Look at Design in Historic Preservation', held at Goucher College, the authors include practicing and academic historic preservationists, architectural historians, architects, landscape architects, and engineers. Organized under the themes of 'Melding Contemporary and Historic Design', 'Design Standards in Changing Environments', 'Modernism and Post modernism in Preservation Design', and
