The relationship of interdependence to conflict is one of the oldest questions in the study of international relations. Liberals have long held that, as Cordell Hull once said, "if trade crosses borders, soldiers won't." Realists, on the other hand, point to 1914: despite extensive economic ties, European governments marched to war.

As suggested by Baldwin and Crescenzi, economic interdependence may be modelled as a function of potential economic exit costs, which may deter, motivate or fail to affect political conflict. A key challenge that is faced is the need for a valid method to measure exit costs and interdependence, whilst maintaining a systematic approach with many countries involved (a large-n analysis).

Abstract. Two studies question whether economic interdependence promotes peace, arguing that previous research has not adequately considered the endogeneity of trade. Using simultaneous equations to capture the reciprocal effects, they report that trade does not reduce conflict, though conflict reduces trade.
