In mathematics, general topology or point set topology is that branch of topology which studies properties of general topological spaces (which may not have further structure; for example, they may not be manifolds), and structures defined on them.

numbers are constructed and their properties established. Part II, comprising the later chapters, Ch. 5-10, is also available in English in softcover.

General Topology |
SpringerLink

General topology has to do with, among other things, notions of convergence. Given a

Where To Download

sequence x_n of points in a set X , convergence of x_n to a point x can be defined in different ways. One of the main ways is by a metric, or distance d , which is nonnegative and real-valued, with $x_n \rightarrow x$ meaning $d(x_n, x) \rightarrow 0$.

This book is a course in general topology, intended for students in the first year of the second cycle (in other words, students in their third university year). The course was taught during the first semester of the 1979-80 academic year (three hours a week of lecture, four hours a week of guided work).
