Play Framework Essentials by Julien Richard-Foy, Paperback ...

Play is a framework to write web applications using Scala or Java. It provides a productive development environment, allowing you to just hit the 'refresh' button in your browser to compile your changes and reload the application. Because of its stateless nature, the framework makes it easy to build applications that scale.

application framework which follows the model-view-controller architectural pattern. It is written in Scala and usable from other programming languages that are compiled to JVM Bytecode, e.g. Java. It aims to optimize developer productivity by using convention over configuration, hot code reloading and display of errors in the browser. Support for the Scala programming language has been available since version 1.1 of the framework. In version 2.0, the ...
