Psychology: The Science of Mind and Behavior imparts students with a scientific understanding of the field of psychology while showing them the impact on their day-to-day existence. A simple conceptual framework within the text emphasizes relations between biological, psychological, and environmental levels of analysis and portrays the focus of modern psychology. Through a variety of features, the text challenges students to think critically about psychology as a science and its impact on their lives. To help students study more effectively and efficiently, a groundbreaking adaptive questioning diagnostic and personalized study plan help students "know what they know" while guiding them to master these concepts through engaging interactivities, exercises, and readings. Now available with Connect Psychology, Psychology: The Science of Mind and Behavior follows the science behind psychology, leading students through the process of critical examination. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

The third edition of Psychology: The science of mind and behaviour provides an authoritative and highly-regarded introduction to this fascinating topic. Although many approaches to the study of Psychology are presented in this text, the emphasis is on the biopsychosocial model. This serves as an underlying commonality to the examination of each topic, giving direction to students at the beginning of their studies in this well-researched field. Written by a team of Australian and New Zealand-based academics, each a subject matter expert, this edition contains updated case studies and a brand new feature. In the News, presenting interesting topics in Psychology. Additional local and global cases explore cross-cultural and Indigenous psychology, and probing questions encourage students to think critically about cases and to examine the research methods used in real-life examples. Aided by its strong pedagogical framework, Psychology makes use of cutting-edge learning technology and interactive resources to provide a comprehensive learning solution.

In this fresh new offering to the Intro Psychology course, authors John Cacioppo and Laura Freberg portray psychology as being an integrative science in two ways. First, they have written a text that reflects psychology's rightful place as a hub science that draws from and is cited by research in many other fields. Second, this text presents psychology as a unified science that seeks a complete understanding of the human mind, rather than as a loosely organized set of autonomous subspecialties. As psychology moves rapidly toward maturity as an integrative, multidisciplinary field, the introductory course offers an opportunity to teach all of psychology in one place and at one time. This text reflects that evolution--and the authors' excitement about it. In this innovative approach to the Intro Psychology course, authors John Cacioppo and Laura Freberg present psychology as an integrative science that is highly relevant for students of all majors. The authors have kept a familiar chapter structure, providing an easy roadmap for the introductory psychology course, but the similarities with other approaches to introductory psychology end there. Integration extends in two directions, highlighting connections within psychology as well as between psychology and other disciplines. The writing and features are smart and engaging, and consistently illustrate the benefit of using multiple perspectives within psychology. Cacioppo and Freberg offer the best science possible, including exciting new research findings likely to expand students' understanding of psychology as a scientific field of study. Features and images coordinate with and enhance the text, providing many additional opportunities for critical thinking and connecting ideas. Psychology is evolving into an integrative, multidisciplinary field, and this text offers an opportunity to teach all of psychology in one place and at one time. We Listened. You Want Science. You Want a Modern Framework. You Want an Easy Prep. You Want Passer/Smith. WE LISTENED: During the development of Passer/Smith, McGraw-Hill employees observed more than 150 hours of Introductory Psychology classes, hosted three national symposia, and commissioned and read over 200 reviews. From that, WE LEARNED: | You want to demonstrate to your students that Psychology is a science. Passer's Research Close-Ups in each chapter provide an inside look at research studies in a scientific journal format. | You want a framework that will help students tie all of the disparate concepts together and see the field of psychology in a modern way. Passer/Smith's Levels of Analysis feature does just that, by consistently showing the biological, psychological, and environmental causes of behavior. | You want all of your resources in one place so you can quickly and easily prep for each lecture. McGraw-Hill's PrepCenter provides all of our instructor resources in an easy-to-use, online site. The bottom line is that if you use Passer/Smith, you'll teach a dynamic, modern course with an organizing framework that reflects psychology as a science and that is easier to prep for than your present course.
