'A great read and a fascinating insight into performance.' Sir Clive Woodward We all want to discover our hidden talents and make an impact with them. But how? Rasmus Ankensen, an ex-footballer and performance specialist, quit his job and for six intense months lived with the world's best athletes in an attempt to answer this question. Why have the best middle distance runners grown up in the same Ethiopian village? Why are the leading female golfers from South Korea? How did one athletic club in Kingston, Jamaica, succeed in producing so many world-class sprinters? Ankensen presents his surprising conclusions in seven lessons on how anyone - or any business, organisation or team - can defy the many misconceptions of high performance and learn to build their own gold mine of real talent.

Why are 137 of the world's 500 best female golfers from South Korea? How did one athletic club in Jamaica produce most of the world's best sprinters? What's the reason that the world's best marathon runners grew up in the same village in Ethiopia? What is the secret behind Brazil's mass production of soccer superstars? How has one tennis club in Moscow managed to develop more top tennis players in 10 years than the whole of the United States? For six months, Rasmus Ankensen travelled around the world visiting these talent gold mines. He talked, trained and lived with the athletes in order to discover what, if anything, they have in common and to attempt to crack the code of developing world-class talent. The result is The Gold Mine Effect, a book that questions all the misconceptions, conventional wisdom and popular theories about talent, hard work, parenting and motivation and looks at how we can apply this knowledge to our own lives.

'High Performance Anthropologist' Rasmus Ankensen brings his first-hand study of success to a mass audience for the first time.

"The main purpose of this volume is to publish, and thus to publicise, the factual material contained in a series of consultancy reports commissioned by the Porgera Joint Venture (PJV) between 1992 and 1994 (Banks 1993, 1994a, 1994b, 1994c; Bonne1|1994). These reports dealt with the social and economic impact of the Porgera gold mine on the population of the Porgera Valley during the period which had elapsed since the Government of Papua New Guinea (PNG) signed a Mining Development Contract with the PJV in April 1989. They were commissioned as part of what became known as the Porgera Social Monitoring Programme, which was itself intended to satisfy some of the conditions which the PNG Department of Environment and Conservation (DEC) had attached to its approval of the company's Environmental Plan (NSR 1988) and Environmental Management and Monitoring Programme(PJV 1991). The substance of these reports has been revised and edited to form Chapters 2-7 of the present volume. The last two chapters have been specially commissioned from two other social scientists who have studied the social impact of the mining project, and who were asked to provide their own comments on the design, management and output of the Porgera Social Monitoring Programme."--Introduction.

The Office of Industrial Technologies (OIT) of the U. S. Department of Energy commissioned the National Research Council (NRC) to undertake a study on required technologies for the Mining Industries of the Future Program to complement information provided to the program by the National Mining Association. Subsequently, the National Institute for Occupational Safety and Health also became a sponsor of this study, and the Statement of Task was expanded to include health and safety. The overall objectives of this study are: (a) to review available information on the U.S. mining industry; (b) to identify critical research and development needs related to the exploration, mining, and processing of coal, minerals, and metals; and (c) to examine the federal contribution to research and development in mining processes.
