Transits & Theodolites - T2

Universal theodolite Wild T2 with detachable tribrach . Apart from this exceptional application, the spring plate on the base plate should always be secured against shifting, so that the instrument cannot fall out. The tribrach is secured to the tripod plate by means of the central fixing screw. The three levelling screws are enclosed, protected from dust; each has a tightening screw to take ...

Wild T-2. The Wild T-2, shown in this image, was used throughout the 1950s – 1980s. It is a relatively small, yet rugged, theodolite that could take observations both during the day and at night. The Coast and Geodetic Survey used the T-2 for third-order surveys. Image courtesy of Commander Grady Tuell, NOAA Corps (ret'd).

wild heerbrugg | eBay

The Wild T2, T3, and A1 instruments were made for many years. In 1926 a conference was held at Tavistock in Devon , UK where Wild theodolites were compared with British ones. The Wild product outclassed the British theodolites so manufacturers such as Cooke, Troughton & Simms and Hilger & Watts set about improving the accuracy of their products to match their competition.

Theodolite - Wikipedia

Originally designed in 1933 the instrument was the less precise sister of the Wild T2.The instrument was dubbed 'Double Centre Theodolite', probably as it was the first Wild Heerbrugg theodolite to have an exchangeable tribrach (see figure 6), quite similar to the one of the Carl Zeiss Thi Heinrich Wild designed in the early 1920s.

Wild T2 Theodolite. The Wild T2 is the classic opto-mechanical theodolite. Hardly another surveying instrument has so profoundly influenced surveying on every continent. There is also a wide range of objective accessories, such as supplementary front lenses and parallel-plate micrometers. As the first major product, Wild developed the Theodolite Wild T2. Later models were launched when Wild ...

The book gives a detailed theoretical background of the constructional principles of instruments necessary for the most general tasks of surveying. Undergraduate and graduate students will find it very useful in surveying studies to get acquainted with the broad variety of instruments, both classical and new ones. At the same time, specialists in surveying will also find the book full of new material. The book contains about 600 pictures, including photographs and detailed descriptions of the most representative types of instrumentation. Older types of instruments already out of use, or used only occasionally, are described in broad outline, mentioning basic principles, methods of testing and possibilities for their modernization. New categories of instruments, such as gyroscopes, compensation levelling instruments, electronic theodolites, distance meters and tachometers, are dealt with in more detail. Care has been taken to include the automation which is rapidly spreading in all fields of instrument manufacture, being necessary to reduce manual operations. The book is intended for builders, architects, technicians, teachers of surveying and professional manufacturers.
